SUMMARY

Technical product builder with experience in software engineering, B2B workflows, and AI-enabled applications. Combines hands-on engineering with founder-led business exposure and customer-focused product thinking. Interested in translating user problems into product requirements, prioritizing solutions, and building products that deliver measurable business value.

PROFESSIONAL EXPERIENCE

Tech & Founder's Office, Securelytix Sep 2026 – Present

- Contribute to founder-led product and business initiatives, connecting technical capabilities with customer problems and business objectives.
- Translate data security, tokenization, key management, and DPDP-related capabilities into customer value propositions and product communication.
- Support product positioning and go-to-market initiatives through technical research, website initiatives, and customer-focused communication.

Software Development Engineer, SuperProcure Jul 2026 – Sep 2026

- Built an internal CRM product from scratch, translating business pain points into features for customer, lead, contact, and activity management.
- Identified and implemented features to automate repetitive workflows, reducing manual effort across team operations by 40%.
- Owned end-to-end feature execution, from requirements and workflow design to integrating 20+ REST APIs using Node.js, Express.js, and PostgreSQL, balancing user needs and technical feasibility.

Software Engineer Intern, Smartverge Technologies LLP Dec 2025 – Jul 2026

- Translated business requirements into technical specifications, implementation tasks, and backend features.
- Developed 10+ REST APIs using Node.js, Express.js, and PostgreSQL for internal products and business workflows.
- Contributed to AI/LLM and RAG-based features, integrating generative AI capabilities into product experiences.

PRODUCT & AI PROJECTS

AI-Powered Job & Interview Tracker GitHub

React.js, Node.js, MongoDB, Redis, BullMQ, Gemini API

- Built a job-search management application to organize applications, interview stages, notes, and follow-up reminders.
- Integrated Gemini API for personalized interview preparation and Redis with BullMQ for asynchronous reminder scheduling.

OpsSync – Sales & Customer Intelligence Platform GitHub

Product Strategy, Business Analytics, React.js, Node.js

- Developing a sales and customer intelligence platform to consolidate customer information, sales performance, and business insights.
- Defined product modules around customer profiles, activity tracking, KPI dashboards, and drill-down analytics to identify performance gaps.

PRODUCT & TECHNICAL SKILLS

Product: Problem Definition, Requirements Gathering, Feature Scoping, User Workflows, Product Development, Agile/Scrum
AI Products: Generative AI, LLMs, RAG, Prompt Engineering, Google Gemini API, AI Applications
Analytics & Business: SQL, PostgreSQL, Business Analysis, KPI Dashboards, Technical Research
Technical: JavaScript, Python, React.js, Node.js, Express.js, REST APIs, MongoDB, Redis, BullMQ

EDUCATION

Master of Computer Applications, VIT Bhopal 2024 – 2026
CGPA: 8.0

Bachelor of Computer Applications, Techno India University 2021 – 2024
CGPA: 7.78
